Subject: Report from today's activities

The four EPA 6EN field personnel deployed to Houston (serving as technical specialists under the ESF-10 OSC) accompanied the TAGA in monitoring Valero and the Manchester area, Southwest Shipyard-Brady Island, United States Gypsum, Targa Resources-Galena Park Terminal, LyondellBasell - Houston Refining on Lawndale Road, Vopak Galena Park Terminal (identified by signage as Kinder Morgan Terminal), and Motiva Enterprise and the adjacent community to the east. No readings of significance were identified. An attempt was made to monitor the area south of Bear Lake, near Channelview. The roads were determined to be unsafe to drive, so monitoring in that area was not conducted. Brief monitoring of Valero's Tank 3 was conducted with the FLIR camera, from a distance south of the tank. From that vantage point, light vapors were observed in the vicinity of Tank 3.

Plans for tomorrow include: Two EPA 6EN field personnel plan to accompany the TAGA for additional monitoring. Targets planned for monitoring include companies that submitted Force Majeure claims, including Shell Deer Park Refinery, Shell Deer Park Chemical Plant, and Vopak Deer Park. Targets may change, based on meteorological conditions. Four EPA field personnel plan to conduct an RMP and CAA inspection at Valero.
